

## EXTRA CREDIT

**Due Date:** By the last day of LECTURE

**Value:** Up to 8 (+2) percentage points to be used towards one of your exam scores.

**Instructions:** Make a TO SCALE model of the solar system out of whatever you can find (including the correct radii and interplanetary distances), then take a video giving me a tour of your solar system and email it to me. In this video you must say at least one interesting thing about each object as you pass it by.

OR

Make an artistic interpretation of the solar system using whatever particular medium you're interested in (an interpretive dance for example, venus being a hot, acidic salsa in yellow dress, Neptune being a whirling blue Lindy Hop reaching speeds of up to 1500 kmh at the equator). Nothing culturally offensive. Email me a video of your piece by the last day of lecture.

**YOU MAY WORK TOGETHER** to produce something of higher production value.

**EXTRA EXTRA CREDIT:** If you prove that you added this video to your Snapchat story, thus betraying the trust of all your friends whom you promised you'd never tarnish their eyes with scientific information, you can earn an additional 2 percentage points.
